(54) Title: PROCOLLAGEN ASSEMBLY

## (57) Abstract

A method of producing a desired procolagen or derivative thereof in a system which co-expresses and assembles at least one further procollagen or derivative thereof. The gene(s) for expressing pro-o chains or derivatives thereof for assembly into the desired procollagen has or have been exogenously selected from natural pro-o chains or exogenously manipulated such as to express said pro-o chains or derivatives thereof with domains which have the activity of C-terminal propeptide domains but which will not co assemble with the of C-terminal propeptide of the pro-o chains or derivatives thereof.
